

New generation deformation sensor

Based on advanced amorphous / nano (quasi)crystalline materials and tested with **great results** on

water dam (Gabčíkovo)
flooded with water

tunnel (Višňové)

gas pipeline (Posádka pri Hlohovci)
placed 10 meters under the ground

■ **applications in construction industry, traffic, geotechnics, soil mechanics**

Technical characteristics:

- Range > 3000 ppm (0,3%)
- Resolution better than 10 ppm (0,001%)
- Simple, cheap and reliable data collection
- Simple and quick installation
- **High resistance to corrosion, humidity, mechanical and electromagnetic effects**

■ **sensitivity, linearity, range of deformations, “networkability”, WIFI**
